General Chemistry I
Chemistry 1110 • Dr. Harris
Fall 2008 Interactive Broadcast
Course Syllabus
3:15 – 5 p.m., WF
4 credits

Dates | WEDNESDAY | FRIDAY
--- | --- | ---
August 27th and 29th | Intro and 1 | 1
September 3rd and 5th | 1 and 2 | 2
September 10th and 12th | 2 | 3
September 17th and 19th | 3 and 4 | Exam 1 and 4
September 24th and 26th | 4 | 5

Extra Credit Information
October 1st and 3rd | 5 | 5 and 6
October 8th and 10th | 6 and 7 | Exam 2 and 7
October 15th, 16th and 17th | 7 | Thursday – Attend Friday Classes - 8 Friday - Fall Break

November 5th and 7th | Exam 3 and 10 | 11
November 12th and 14th | 11 | 12
November 19th and 21st | 12 | 12 and Exam 4
November 26th and 28th | Thanksgiving | Thanksgiving
December 3rd and 5th | 1 – 6 Help Session | 7 – 12 Help Session
December 10th | Final Exam: 3:15 – 5:05 pm |

Exams 1 – 3 are held during the first 50 minutes (3:15 – 4:05 p.m.) of class. Exam 4 will be given at the conclusion of the chapter 12 lecture information and will also last 50 minutes.

</table>

Note: Scores rounded to nearest one’s place (91.4% = 91% and 91.5% = 92%).
The instructor reserves the right to lower these cutoff scores.

Policies and Procedures

1. The administration of Chemistry 1110 will adhere strictly to the policies outlined in the USU Fall 2008 Semester Schedule of Classes.

2. Qualified students with disabilities may be eligible for reasonable accommodations. All accommodations are coordinated through the Disability Resource Center (DRC) in Room 101 of the University Inn, 797-2444 voice, 797-0740 TTY, or toll free at 1-800-259-2966. Please contact the DRC as early in the semester as possible. Alternate format materials (Braille, large print or digital) are available with advance notice.

3. Except for school-excused absences, exams will not be rescheduled. The following procedure will be used to reschedule an exam due to a school-excused absence:
   a. Obtain a letter from the respective academic advisor/director/supervisor excusing the student from the exam due to the school excused absence.
   b. Before class begins, hand deliver letter to facilitator 2 weeks before the scheduled exam time outlined in the syllabus and request that the letter be mailed directly to Dr. Harris.
   c. Send an e-mail message to Dr. Harris listing the days and times that the student is available to complete the exam. The rescheduled exam must be completed before the scheduled exam time outlined in the syllabus.

All exam rescheduling requests for non school-excused absences will be directly referred to this policy without any further discussion.

4. Keep in mind that the practice exam serves as an assessment of your understanding of concepts presented in lecture. Hopefully you will be diligent about following the suggested study plan outlined at the beginning of the course. Exam questions may be the same or similar to the practice exam problems but may also be completely different. Although exam questions may be completely different from the practice exam problems, all exam questions will focus on the concepts discussed in lecture.

5. Scantrons will be provided by the instructor.

6. When taking the exam, be sure to answer the problem and immediately fill out the corresponding scantron bubble. Avoid waiting to fill out your scantron sheet when finished with your exam.

7. Double check your scantron sheet before turning it in. Make sure that all of your answers have been entered the way you want them to appear on your scantron. Once an exam scantron is submitted, it may not be retrieved in order to make additions and/or changes.

8. Please arrive early to take the exam. Exams and scantron sheets will not be handed out after the first completed exam scantron sheet has been submitted. All requests for an exam and scantron sheet after the first completed exam scantron sheet has been submitted will be directly referred to this policy without any further discussion.

9. Although class attendance will not be officially taken, it will be absolutely essential that every effort is made in attending each lecture. All students will be held responsible for lecture material, worked problems, and/or course announcements that are presented in lecture.

10. If you choose to complete an optional extra-credit molecular modeling exercise, one percentage point (1%) will be added to your final grade percentage. This is helpful to those students who end up with a final borderline grade percentage. The extra-credit submission deadline will be at 3:15 p.m. Wednesday, November 5th when we meet to take the third exam. Further information will be given in class on Wednesday, September 24th regarding the specific details in producing the extra-credit assignment.
Course Objectives and Assessment

1. Prepare students for careers in health-related professions.
2. “Relate the structure and behavior of matter to its functions in health and life” (see text preface).
3. Lecture learning checks will be used as a means of assessing student comprehension. These student-centered learning strategies have previously proven successful in this chemistry course.

Some Learning Objectives:

- Review math and learn to do calculations while working everyday examples of problems in health and medicine using metric units.
- Understand the relationship of isotopes to the atomic mass of an element on the periodic table.
- Understand the relationship between electron arrangement, group number, and periodic law.
- Understand different types of radiation, radiation protection, balancing of nuclear equations, and the fusion and fission processes.
- Learn the relationship between group numbers, valence electrons, and the formation of ionic and covalent compounds.
- Write ionic formulas and names of compounds with polyatomic ions.
- Use VSEPR theory to determine the shape, bond angles, and polarity of a molecule.
- Classify an equation as a combination, decomposition, replacement, combustion, and/or oxidation-reduction.
- For a given mass of a substance in a reaction, use the appropriate mole factors and molar masses to calculate the mass of a reactant, product/percent yield.
- Determine the energy lost or gained during a change of state/temperature.
- Use the ideal gas law to calculate an unknown pressure, volume, moles, and/or temperature of a gas.
- Understand solubility and determine whether a salt will dissolve in water.
- Calculate the percent concentrations and molarity of a solution.
- Describe the behavior of a red blood cell in hypotonic, isotonic, and hypertonic solutions.
- Understand and write the equilibrium constant for an equation.
- Describe the characteristics of acids and bases.
- Classify bases/acids as strong or weak.
- Predict whether a salt will form an acidic, basic, or neutral solution.
- Describe the function of a buffer.
- Describe the properties and functional groups found in organic compounds.
- Describe the physical properties and write the IUPAC names of alkanes and cycloalkanes.
- Describe the properties, reactions, and IUPAC names of alkenes and alkynes.
