Chapter 5 – Nuclear Chemistry – Practice Problems

1. Fill in the missing information in the chart:

<table>
<thead>
<tr>
<th>Medical Use</th>
<th>Atomic symbol</th>
<th>Mass number</th>
<th>Number of protons</th>
<th>Number of neutrons</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heart imaging</td>
<td>$^{201}$Tl</td>
<td>201</td>

</table>

\[ \text{atomic #} = \# \text{protons} \]
\[ \text{mass #} = \# \text{protons} + \# \text{neutrons} \]

**Row 1**

\[ ^{201}\text{Tl} \]
\[ \text{atomic #} = 81 \text{ protons} \]
\[ \text{mass #} = 201 \text{ mass #} \]
\[ 201 - 81 = 120 \text{ neutrons} \]

**Row 2**

\[ ^{60}\text{Co} \]
\[ \sqrt{\text{cobalt}} \]
\[ 27 \text{ protons} \]
\[ 60 \text{ mass #} \]
\[ 60 - 27 = 33 \text{ neutrons} \]

**Row 3**

\[ ^{67}\text{Ga} \]
\[ 31 \text{ protons} \]
\[ 36 \text{ neutrons} \]
\[ 31 + 36 = 67 \text{ mass #} \]

**Row 4**

\[ ^{131}\text{I} \]
\[ 53 \text{ protons} \]
\[ 131 \text{ mass #} \]
\[ 131 - 53 = 78 \text{ neutrons} \]

**Row 5**

\[ ^{32}\text{P} \]
\[ 15 \text{ protons} \]
\[ 17 \text{ neutrons} \]
\[ 32 \text{ mass #} \]
2. What is the nuclear symbol for a radioactive isotope of copper with a mass number of 60?
   A) $^{60}_{29}\text{Cu}$
   B) $^{29}_{60}\text{Cu}$
   C) 29Cu
   D) $^{60}_{31}\text{Cu}$
   E) $^{31}_{29}\text{Cu}$

3. Identify the following based on the mass number and atomic number: $^4_2X$
   A) alpha particle
   B) beta particle
   C) positron particle
   D) gamma ray
   E) neutron

4. Identify the following based on the mass number and atomic number: $^1_0X$
   A) alpha particle
   B) beta particle
   C) positron particle
   D) gamma ray
   E) neutron

   Types of radiation:
   - $^4_2\text{He}$ - alpha
   - $^0_{-1}\text{e}$ - beta
   - $^0_{+1}\text{e}$ - positron
   - $^0_{-1}\text{y}$ - gamma
   - $^1_1\text{H}$ - proton
   - $^1_0\text{n}$ - neutron
5. Identify the following based on the mass number and atomic number: $^\text{1}_\text{X}$
   A) alpha particle  
   B) beta particle  
   C) electron  
   D) proton  
   E) neutron

6. Identify the following based on the mass number and atomic number: $^\text{0}_\text{X}$
   A) alpha particle  
   B) beta particle  
   C) positron particle  
   D) gamma ray  
   E) neutron

7. Gamma rays require the heaviest shielding of all the common types of nuclear radiation because gamma rays have the
   A) highest energy.  
   B) most intense color.  
   C) lowest energy.  
   D) largest particles.  
   E) heaviest particles.

8. The symbol $^\text{0}_\text{1}e$ is a symbol used for a(n)
   A) proton.  
   B) positron.  
   C) gamma ray.  
   D) beta particle.  
   E) alpha particle.

9. Match the type of radiation (1 to 3) with each of the following statements:
   1. Alpha particle  
   2. beta particle  
   3. gamma radiation  
   a. penetrates farthest into skin and body tissue  
   b. shielding protection includes lab coats and gloves  
   c. travels only a short distance by air
10. Match the type of radiation (1 to 3) with each of the following statements:

1. Alpha particle
2. Beta particle
3. Gamma radiation

a. Does not penetrate skin \(\alpha\)
b. Shielding protection includes lead or thick concrete \(\gamma\)
c. Can be very harmful if ingested \(\alpha\)

11. The nuclear symbol of helium, \(^4\_2\text{He}\), is also the symbol for designating a(n)
   
   A) proton.  
   B) neutron.  
   C) gamma ray.  
   D) beta particle.  
   E) alpha particle.

12. When a beta particle and positron combine, what particle is made?
   \(-1^0e + +1^0e \rightarrow ?\)
   
   A) proton.  
   B) neutron.  
   C) gamma ray.  
   D) beta particle.  
   E) alpha particle.

13. The symbol \(-1^0e\) is a symbol used for a(n)
   
   A) proton.  
   B) neutron.  
   C) gamma ray.  
   D) beta particle.  
   E) alpha particle.

14. Which of the following have mass \(\# = 0\)
   A) Neutron
   B) Proton
   C) Alpha particle
   D) Positron particle
   E) More than one of the above
15. Which type of radiation has the largest mass?
A) beta particle
B) gamma rays
C) alpha particle
D) neutron
E) positron particle

16. The process in which a nucleus spontaneously breaks down by emitting radiation is known as
A) transmutation.
B) transformation.
C) fusion.
D) a chain reaction.
E) radioactive decay.

17. A nuclear equation is balanced when
A) the same elements are found on both sides of the equation.
B) the sum of the mass numbers and the sum of the atomic numbers of the particles and atoms are the same on both sides of the equation.
C) the same particles and atoms are on both sides of the equation.
D) different particles and atoms are on both sides of the equation.
E) the charges of the particles and atoms are the same on both sides of the equation.

18. Iodine-131 decays by beta decay to
A) iodine-132.
B) tellurium-131.
C) iodine-130.
D) bromine-131.
E) xenon-131.

19. Finish the equation for positron emission: $^1p \rightarrow \_\_\_ + ?$
A) beta particle
B) gamma rays
C) alpha particle
D) neutron
E) positron particle

---

1. Write the incomplete nuclear equation.
2. Determine missing mass #.
3. Determine missing atomic #.
4. Determine symbol of the new nucleus.
5. Complete nuclear equation.
20. What is the radioactive particle released in the following nuclear equation?
\[
\frac{^{159}_{74}}{\text{W}} \rightarrow \frac{^{155}_{72}}{\text{Hf}} + ?
\]
A) alpha particle  
B) beta particle 
C) gamma ray  
D) proton  
E) neutron 

1. Write the incomplete nuclear equation
2. Determine missing mass # 
3. Determine missing atomic # 
4. Determine symbol of new nucleus 

21. When aluminum-27 is bombarded with a neutron, a gamma ray is emitted. What radioactive isotope is produced?
A) silicon-27  
B) silicon-28 
C) aluminum-28  
D) magnesium-27  
E) magnesium-28

22. The nuclear reaction shown below is an example of what type of process?
\[
\frac{^{224}_{90}}{\text{Th}} \rightarrow \frac{^{220}_{88}}{\text{Rn}} + \frac{^{4}_{2}}{\text{He}}
\]
A) fusion  
B) fission 
C) translation  
D) alpha decay  
E) beta decay

23. Nitrogen-17 is a beta emitter. What is the isotope produced in the radioactive decay?
A) \( ^{17}_{6} \text{C} \)  
B) \( ^{13}_{5} \text{B} \)  
C) \( ^{18}_{7} \text{N} \)  
D) \( ^{13}_{9} \text{F} \)  
E) \( ^{17}_{8} \text{O} \)
24. What is missing in the nuclear reaction shown below?
\[ ^{10}_5 \text{B} + ^{4}_2 \text{He} \rightarrow _____ + ^{1}_0 \text{n} \]
A) a neutron
B) \( ^{13}_7 \text{B} \)
C) \( ^{14}_7 \text{N} \)
D) \( ^{13}_7 \text{N} \)
E) \( ^{13}_5 \text{N} \)

25. What is the radiation formed?
\[ ^{0}_1 \text{n} \rightarrow ^{1}_1 \text{H} + ? \]
A) alpha particle
B) beta particle
C) positron
D) gamma ray
E) proton

26. What is missing in the nuclear reaction shown below?
\[ ^{10}_5 \text{B} + ^{4}_2 \text{He} \rightarrow ^{13}_7 \text{N} + _____ \]
A) gamma radiation
B) a positron
C) a neutron
D) an alpha particle
E) a beta particle

27. The product from the alpha decay of \( ^{235}_92 \text{U} \) is
A) \( ^{235}_93 \text{Np} \)
B) \( ^{239}_94 \text{Pu} \)
C) \( ^{231}_90 \text{Th} \)
D) \( ^{233}_80 \text{Ra} \)
E) \( ^{236}_92 \text{U} \)
28. What is missing in the nuclear reaction shown below?
\[ ^{66}_{30}\text{Zn} + ^{1}_{1}\text{p} \rightarrow \_ \\
\]
A) a proton  
B) \(^{67}_{31}\text{Ga}\)  
C) \(^{66}_{31}\text{Ga}\)  
D) \(^{67}_{31}\text{Zn}\)  
E) \(^{65}_{29}\text{Cu}\)  

29. Write a balanced equation for the positron emission of the following: \(^{15}_{8}\text{O}\)  
A) \(^{15}_{8}\text{O} \rightarrow ^{0}_{+1}\text{e} + ^{15}_{7}\text{N}\)  
B) \(^{15}_{8}\text{O} + ^{0}_{+1}\text{e} \rightarrow ^{15}_{9}\text{N}\)  
C) \(^{15}_{8}\text{O} \rightarrow ^{0}_{-1}\text{e} + ^{15}_{9}\text{F}\)  
D) \(^{15}_{8}\text{O} + ^{0}_{-1}\text{e} \rightarrow ^{15}_{7}\text{N}\)  
E) None of the above  

30. The nuclear reaction \(^{126}_{50}\text{Sn} \rightarrow ^{126}_{51}\text{Sb} + ?\)  
is an example of  
A) fusion.  
B) fission.  
C) translation.  
D) alpha decay.  
E) beta decay.  

31. Write a balanced equation for the positron emission of Nitorgen-13  
A) \(^{13}_{7}\text{N} \rightarrow ^{0}_{+1}\text{e} + ^{13}_{8}\text{O}\)  
B) \(^{13}_{7}\text{N} \rightarrow ^{0}_{+1}\text{e} + ^{13}_{4}\text{Be}\)  
C) \(^{13}_{7}\text{N} \rightarrow ^{0}_{+1}\text{e} + ^{13}_{6}\text{C}\)  
D) \(\text{Corrected:} \, ^{13}_{7}\text{N} \rightarrow ^{0}_{+1}\text{e} + ^{13}_{6}\text{C}\)  
E) \(^{13}_{7}\text{N} \rightarrow ^{0}_{-1}\text{e} + ^{13}_{8}\text{O}\)
32. When a gamma ray is emitted from the nucleus of an atom, the nuclear mass
A) increases by two units.
B) decreases by one unit.
C) increases by one unit.
D) decreases by two units.
E) remains the same.

33. Radium-226 decays by alpha decay to
A) barium-131.
B) cobalt-60.
C) carbon-14.
D) polonium-218.
E) radon-222.

34. The recommended dosage of I-131 for a test is 4.2 microcuries per kg of body weight. How many mCi should be given to a 55 kg patient? (1 mCi = 1000 μCi)
A) 230 mCi
B) 0.23 mCi
C) 0.076 mCi
D) 760 mCi
E) 13.8 mCi

35. Suppose a person absorbed 50 mrad of alpha radiation. What would be the equivalent dose in millirems? The biological effect factor of alpha radiation is 20.
A) 1 mrem
B) 1000 mrem
C) 2.5 mrem
D) 2500 mrem
E) 100 mrem

36. A sample of cerium-141 for a diagnostic test was dissolved in saline solution to an activity of 4.5 mCi/mL. If the patient undergoing the test needs a dose of 10. mCi, how much of the solution should be injected into the patient?
A) 45 mL
B) 4.5 mL
C) 2.2 mL
D) 22 mL
E) 4.5 mL
37. The unit used to measure the amount of radiation absorbed by a gram of material is called
A) rad.
B) sievert.
C) curie.
D) rem.
E) becquerel

38. Two technicians in a nuclear laboratory were accidentally exposed to radiation. If Technician #1 was exposed to 8mGy and Technician #2 to 5 rad, which technician received more radiation.
(1 Gy = 100 rad)
A) Technician #1
B) Technician #2
C) They both received the same.

Convert mGy to rad so they are both in rad and you can compare. (You could take them to mGy.)

\[
\text{Tech\#1} = \frac{8\text{mGy}}{1000\text{mGy/Gy}} \times \frac{100\text{rad}}{1\text{Gy}} = 0.8\text{rad}
\]

39. A sample of technetium-99m has an activity of 1.5 Ci. How many disintegrations occur in the technetium-99m sample in 5.0 sec?
A) \(5.6 \times 10^{10}\)
B) \(2.8 \times 10^{11}\)
C) \(1.1 \times 10^{10}\)
D) 7.5
E) \(2.0 \times 10^{-10}\)

\[
\text{Ci} = \text{disintegration per second of 1g radium}
\]
\[
\text{Bq} = \text{disintegrations per second}
\]

\[
\text{convert Ci to Bq then multiply by 5 sec}
\]

\[
\frac{1.5\text{Ci}}{1\text{Ci}} \times \frac{3.7 \times 10^{10}\text{Bq}}{1\text{Ci}} \times 5\text{sec} = 2.8 \times 10^{11} \text{ disintegrations}
\]

40. A patient receives 10 mrad of gamma radiation. If the factor that adjusts for biological damage for gamma radiation is 1, how many mrem did the patient receive?
A) 2 mrem
B) 5 mrem
C) 10 mrem
D) 20 mrem
E) 200 mrem

\[
(10\text{mrad}) (1) = 10\text{ mrem}
\]

41. The activity of a radioisotope is defined as:
A) the radiation absorbed by a gram of material
B) the biological effect of different kinds of radiation
C) the amount of radiation absorbed by a material
D) the number of disintegrations per second
E) rad multiplied by a factor
42. The unit(s) that are used to describe activity is(are):
A) gray (Gy)
B) Becquerel (Bq)
C) rad
D) Curie (Ci)
E) (b) and (d)

43. The unit that measures radiation by the biological effects is:
A) gray (Gy)
B) Becquerel (Bq)
C) rad
D) rem
E) sievert (Sv)

44. The unit(s) used to measure the amount of radiation absorbed by a material (ex: human tissue) is(are):
A) gray (Gy)
B) Becquerel (Bq)
C) rad
D) Curie (Ci)
E) (a) and (c)

45. Biological damage (rem) can be calculated by:
A) multiplying the absorbed dose (rad) by a factor that adjusts for biological damage.
B) the number of disintegrations per second.
C) dividing the absorbed dose (rad) by a factor that adjusts for biological damage.
D) with a Geiger Counter.
E) the severity of the patient’s cancer.

46. Sodium-24 has a half-life of 15 hours. How many hours is three half-lives?
A) 60 hours
B) 45 hours
C) 30 hours
D) 15 hours
E) 7.5 hours

\[ 15 \times 3 = 45 \text{ hours} \]

47. The half-life of a radioisotope is
A) one-half of the time it takes for the radioisotope to completely decay to a nonradioactive isotope.
B) the time it takes for the radioisotope to become an isotope with one-half of the atomic weight of the original radioisotope.
C) the time it takes for the radioisotope to become an isotope with one-half the atomic number of the original radioisotope.
D) the time it takes for the radioisotope to lose one-half of its neutrons.
E) the time it takes for one-half of the sample to decay.
48. Krypton-79 has a half-life of 35 hours. How many half-lives have passed after 105 hours?
A) 1 half-life  
B) 2 half-lives  
C) 3 half-lives  
D) 4 half-lives  
E) 5 half-lives

\[
\begin{align*}
105 \text{ hours} & \quad \text{half-life} = 3 \text{ half-lives} \\
35 \text{ hours} & 
\end{align*}
\]

49. The half-life of bromine-74 is 25 min. How much of a 4.0 mg sample is still active after 75 min?
A) 0.50 mg  
B) 1.0 mg  
C) 2.0 mg  
D) 0.25 mg  
E) 4.0 mg

\[
\begin{align*}
75 \text{ min} & \quad \text{half-life} = 3 \text{ half-lives} \\
25 \text{ min} & 
\end{align*}
\]

Each arrow represents 1 half-life.

50. Technetium-99m is an ideal radioisotope for scanning organs because it has a half-life of 6.0 hours and is a pure gamma emitter. Suppose that 80 mg were prepared in the technetium generator this morning. How many milligrams of technetium-99m would remain after 18 hours?
A) 15 mg  
B) 5 mg  
C) 10 mg  
D) 20 mg  
E) none

\[
\begin{align*}
18 \text{ hours} & \quad \text{half-life} = 3 \text{ half-lives} \\
6 \text{ hours} & 
\end{align*}
\]

80 mg → 40 mg → 20 mg → 10 mg

51. A sample of sodium-24 with an activity of 12 mCi is used to study the route of blood flow in the circulatory system. If sodium-24 has a half-life of 15 hours, what is the activity after three half-lives?
A) 12 mCi  
B) 6 mCi  
C) 3 mCi  
D) 1.5 mCi  
E) 0 mCi

\[
\begin{align*}
12 \text{ mCi} & \quad 1 \rightarrow 6 \text{ mCi} \rightarrow 3 \text{ mCi} \rightarrow 1.5 \text{ mCi} \\
\text{not needed} & 
\end{align*}
\]

52. Strontium-85, used for bone scans, has a half-life of 65 days. How long will it take for the radiation level of Strontium-85 to drop to one-fourth of its original level.
A) 65 days  
B) 130 days  
C) 195 days  
D) 260 days  
E) 266 days

\[
\begin{align*}
100 \text{ Ci} & \rightarrow 50 \text{ Ci} \rightarrow 25 \text{ Ci} \\
\text{One fourth will be 25 Ci} & \\
\end{align*}
\]

It takes 2 half-lives to reach \(\frac{1}{4}\) radiation.

\[
105 \times 2 = 130 \text{ days}
\]
53. What type of imaging technique uses the formula: \( ^{18}F \rightarrow ^{18}O + _{+1}^0e \)

A) MRI  
B) CT  
C) PET  
D) SMT  
E) RTS

54. An imaging technique in which a computer monitors the degree of absorption of X-ray beams is known as

A) positron emission tomography (PET).  
B) magnetic resonance imaging (MRI).  
C) computerized tomography (CT).  
D) radioactive iodine uptake (RAIU).  
E) a scan.

55. An imaging technique that detects the energy emitted by hydrogen atoms in a magnetic field is known as

A) positron emission tomography (PET).  
B) computerized tomography (CT).  
C) magnetic resonance imaging (MRI).  
D) radioactive tracer study.  
E) super magnetic tomography (SMT).

56. When an atom of uranium-235 is bombarded with neutrons, it splits into smaller nuclei and produces a great amount of energy. This nuclear process is called

A) fission.  
B) fusion.  
C) decomposition.  
D) chain reaction.  
E) ionization.

57. Fill in the nuclear fission reaction: \( _{92}^{235}U + _{0}^{1}n \rightarrow _{36}^{91}Kr + _{0}^{3}n + _{56}^{142}Ba + \text{energy} \)

A) \( _{56}^{142}Ba \)  
B) \( _{56}^{144}Ba \)  
C) \( _{0}^{1}n \)  
D) \( _{92}^{236}U \)  
E) \( _{54}^{142}Xe \)
58. What does Einstein’s equation $E=mc^2$, explain?
A) The amount of energy released when mass is lost in a fission reaction.
B) The amount of energy released when mass is lost in a fusion reaction.
C) The energy of the radiation in alpha decay.
D) The energy of the radiation in beta decay.
E) The energy of gamma rays.

59. What begins nuclear fission?
A) Radioactive materials fission by themselves.
B) A spark.
C) Nuclear fission has always been occurring on the Sun.
D) Bombardment by high-energy particles into a radioactive atom.
E) A particle accelerator.

60. What does the “critical mass” describe?
A) The amount of heat given off during a fission reaction.
B) The amount of fuel required for a fission reaction to maintain itself without adding more fuel.
C) The amount of radioactive material required to make it explosive.
D) The amount of radioactive material needed to begin nuclear fission.
E) The amount of radioactive material needed to begin nuclear fusion.

61. What was required to detonate an atomic bomb and achieve critical mass?
A) 6 tons of radioactive material inside the bomb.
B) The impact of the bomb hitting the ground.
C) A fuse to ignite the radioactive material.
D) TNT was detonated around the outside of the radioactive material.
E) Bombs don’t have to reach critical mass to explode.

62. Can nuclear reactors explode?
A) No
B) No
C) No
D) No
E) All of the above

63. In the Sun, nuclei of hydrogen combine to form a larger nucleus and release a great amount of energy. The process is known as
A) fission.
B) fusion.
C) metathesis.
D) chain reaction.
E) ionization.
For problems 65-69, indicate whether each of the following is characteristics of fission or fusion:

a. both fission and fusion
b. fission
c. fusion

64. A large nucleus is split into smaller nuclei  \textit{fission}

65. Very high temperatures must be achieved to initiate the reaction.  \textit{fusion}

66. This process produces radioactive by-products  \textit{fission}

67. Large amounts of energy are released.  \textit{both}

68. Two small nuclei combine to form a larger nucleus.  \textit{fusion}
